

Target Users and Stakeholders

3.1 Primary Users

Primary users are the **direct operators and consumers of the platform**, interacting with it daily for monitoring, operations, decision-making, and system management. Each role is designed with **specific permissions, dashboards, and workflows** aligned to their responsibilities.

1. Super Admin (Platform Owner / SaaS Operator)

Role Overview

The Super Admin is the **highest authority within the platform**, responsible for managing the entire multi-tenant ecosystem. This role typically belongs to the **platform provider (your organization)** or enterprise-level system owners.

Core Responsibilities

Tenant & Organization Management

- Create, manage, and configure tenants (clients / organizations)
- Control tenant-level isolation and data boundaries
- Assign subscription plans and usage limits

Project Governance

- Oversee all projects across tenants
- Ensure correct configuration standards
- Monitor onboarding progress across customers

Connector Template Management

- Define reusable connector templates for:
 - Shopify
 - Magento
 - Payment gateways
 - Custom APIs
- Maintain mapping rules and schema standards
- Version and upgrade connectors centrally

Global Operational Monitoring

- Monitor platform-wide:
 - integration health
 - ingestion pipelines
 - sync failures
 - queue backlogs
- Identify systemic issues affecting multiple customers

Product-Level Configuration

- Define global:
 - KPI definitions
 - alert templates
 - default dashboards
 - system rules
- Enable/disable features across tenants

Platform Interaction

Super Admin interacts with:

- **Global dashboard**
- **Tenant management console**
- **Connector configuration system**
- **Internal observability dashboards**

- **Audit and compliance tools**

Key Outcomes

- Platform stability
- Standardization across tenants
- Faster onboarding at scale
- Controlled SaaS growth

2. Project Admin / Business Admin

Role Overview

The Project Admin is the **primary owner at the project (client/store) level**, responsible for configuring, operating, and maintaining the system for a specific business unit, brand, or store.

Core Responsibilities

Project Onboarding

- Create new projects
- Define:
 - timezone
 - currency
 - business type
- Configure initial system setup

Integration Management

- Connect systems such as:
 - Shopify / Magento
 - payment gateways
 - shipping providers
 - ERP / CRM
- Provide credentials and authorize access
- Validate connection health

Dashboard Configuration

- Customize dashboards based on business needs
- Configure KPI visibility
- Set thresholds and alerts

Monitoring KPIs

- Track:
 - revenue
 - orders
 - conversion
 - refunds
 - performance metrics

User & Access Management

- Add/remove users
- Assign roles:
 - operator
 - analyst
 - viewer
- Control permissions

Platform Interaction

Project Admin interacts with:

- **Project dashboard**
- **Integration configuration center**
- **Alert management system**

- **User management interface**

Key Outcomes

- Successful onboarding of systems
- Reliable KPI visibility
- Controlled user access
- Smooth day-to-day operations

3. Operations Teams

Role Overview

Operations teams use the platform as their **day-to-day execution and monitoring tool**. They are focused on **ensuring that orders, payments, and fulfillment processes run smoothly**.

Core Responsibilities

Order Flow Monitoring

- Track order lifecycle:
 - placed → processed → shipped → delivered
- Identify delays or failures

Integration Health Monitoring

- Monitor:
 - sync jobs
 - webhook delivery
 - ingestion lag
- Ensure data pipelines are functioning

Failure Detection

- Identify issues such as:
 - failed payments
 - delayed shipments
 - missing orders
 - inventory mismatches

Exception Handling

- Take corrective actions:
 - re-trigger syncs
 - escalate issues
 - coordinate with technical teams

Platform Interaction

Operations teams use:

- **Operational dashboard**
- **Integration health view**
- **Alert center**
- **Order-level drilldowns**

Key Outcomes

- Faster issue resolution
- Reduced operational disruptions
- Improved fulfillment accuracy

4. E-commerce Managers

Role Overview

E-commerce managers are focused on **business performance, growth, and optimization**. They use the platform to analyze trends and make strategic decisions.

Core Responsibilities

Revenue & Performance Tracking

- Monitor:

- total revenue
- AOV (average order value)
- conversion rates
- channel contribution

Campaign & Channel Analysis

- Evaluate performance across:
 - website
 - app
 - marketplaces
 - offline channels

Product & Order Insights

- Identify:
 - top-performing products
 - underperforming SKUs
 - order patterns

Customer Behavior Analysis

- Track:
 - repeat customers
 - session behavior
 - funnel drop-offs

Platform Interaction

E-commerce managers primarily use:

- **Executive dashboards**
- **Trend analysis views**
- **Channel comparison reports**

Key Outcomes

- Better marketing decisions
- Improved conversion rates
- Revenue optimization

5. Technical / Support Teams

Role Overview

These teams are responsible for **ensuring system reliability, debugging issues, and maintaining data accuracy.**

Core Responsibilities

API & Integration Monitoring

- Monitor:
 - API failures
 - rate limits
 - authentication issues

Webhook Tracking

- Ensure:
 - events are received
 - no events are missed
 - retry mechanisms work

Log Analysis

- Review:
 - sync logs
 - ingestion logs
 - transformation errors

Data Validation

- Diagnose:
 - missing records
 - duplicate data
 - inconsistent states

Data Freshness Assurance

- Ensure data is:
 - up-to-date
 - consistent across systems

Platform Interaction

Technical teams use:

- **Log viewers**
- **Webhook monitoring panels**
- **sync job dashboards**
- **reconciliation reports**

Key Outcomes

- Reduced downtime
- Faster debugging
- Higher data accuracy

6. Viewer / Client Users

Role Overview

These users are **read-only consumers of data**, typically stakeholders who need visibility but not control.

Core Responsibilities

- View dashboards
- Monitor KPIs
- Track business performance

Access Characteristics

- No configuration permissions
- No integration access
- Limited drill-down (optional)

Platform Interaction

- **Dashboard views**
- **Reports**
- **KPI summaries**

Key Outcomes

- Transparency
- Easy access to insights
- Reduced dependency on reporting teams

3.2 Secondary Stakeholders

Secondary stakeholders may not use the platform daily but are **impacted by its outputs and rely on its data for decisions, strategy, and governance**.

1. Business Leadership (CXOs / Directors)

Role

Strategic decision-makers

Use Cases

- Review revenue trends
- Evaluate business performance
- Identify risks and opportunities

Value

- Faster, data-driven decisions
- Unified reporting across teams

2. Customer Success Teams

Role

Ensure customer satisfaction and retention

Use Cases

- Monitor client system health
- Identify issues before escalation
- Provide proactive support

Value

- Better customer experience
- Reduced churn

3. Implementation / Onboarding Teams

Role

Handle project setup and integration

Use Cases

- Configure connectors
- Validate integrations
- Set up dashboards

Value

- Faster onboarding cycles
- Standardized implementation

4. Product Teams

Role

Build and improve the platform

Use Cases

- Analyze usage patterns
- Identify feature gaps
- Improve connectors and UX

Value

- Continuous product improvement
- Data-driven roadmap

5. Compliance and Governance Teams

Role

Ensure regulatory and internal compliance

Use Cases

- Audit logs review
- Data access validation
- Security monitoring

Value

- Reduced compliance risk
- Better audit readiness

Role-Based Access Summary

Role	Access Level	Key Focus
Super Admin	Full (Platform-wide)	Governance, scaling
Project Admin	Full (Project-level)	Setup, operations
Operations	Limited (Operational)	Execution & monitoring

Role	Access Level	Key Focus
E-commerce Manager	Analytical	Business insights
Technical Team	Technical access	Debugging & reliability
Viewer	Read-only	KPI visibility

Final Insight

This user model ensures that:

- Every stakeholder sees **only what they need**
- Responsibilities are **clearly separated**
- The platform supports both:
 - **technical observability**
 - **business intelligence**

This separation is critical for **scalability, security, and usability** in a multi-tenant SaaS system.
